TRANSMITTAL OF THE FINAL RADIOLOGICAL CLOSEOUT SURVEY PLAN FOR BUILDING 779 - MEH-101-99

The purpose of this correspondence is to transmit the Final Radiological Closeout Survey Plan for the Building 779 Cluster. Recommended changes made are as follows:

- Methodology for determining paint/surface media and total activity data compliance with the DCGL<sub>w</sub> for exterior building surfaces. Implemented the use of the sign test for total surface activity measurements and paint/surface media samples to improve MARSSIM compliance.
- Removed Buildings 780, 780A, and 780B from final survey requirements;
- Added discussion on the inability to perform final survey measurements in the spaces between the cinderblocks on hydrolazed walls;
- Added discussion on the use of Electras with DP8 probes (600 cm<sup>2</sup>). Clarified MDA discussion for Electras with DP6 probes (100 cm<sup>2</sup>); and
- Reduced the survey requirement on exterior walls to 50% for Class Two areas. (MARSSIM requires 10-100%).
